Project Overview

I wanted to make a multi-level armoire capable of taking blunt force, fire, stabs and perhaps low caliber bullets. I ended up deciding this would be a very good Halloween costume and started working on it. I used uhpe plates pla-basedBackend armor and carbon fiber the front.

Why?

I have always wanted to create a suit of armor and figuring I'm trying to create the Iron Man initiative I figured this would create a good start and would make it possible to do the rest

how

I used uhpe plates that I bought off Amazon Which is police grade stab resistant and used a carbon fiber armor making technique I have created myself to make a very lightweight and powerful armor

conclusion

This was a very good project and I should attempt this againAs it was a lot of fun and the results were very good.
