Project Overview

Created in the EMP for class show he was doing this to demonstrate the properties of waves and how certain technologies that we do not think so apply and how energy and waves go hand in hand it was a very interesting way of doing it

device

Why?

This EMP was created for both my practical use and testing different Technologies I wanted to create against it it doubled as a class age to show people and make them explain how electricity and waves worked together

how

This was built using a coil of wire and a spark gap so that I did not overheat it the Transformer these parts would create a very very powerful wave without the spark gap it went overheat but with the spark cap it'll just burn through energy creating a very good EMP

conclusion

The EMP worked fantastically on all principles and I would do it again as this was a great experiment and had great results
