Project Overview

This project was done for the liger box creating things for a trinket Dcmp in the analysis. Then we all knew this would be done for some excavation for my FRC team called the liger box team 2877 this week done with coins and things I called geodes which were rocks with little crystal

balls and a little wooden decal on them.

Why?

This was done for an Outreach and impact event to make a better experience for the excavation event in the 2026 Dcmp District. This was done for our Outreach and impact to increase our chance of getting to Houston.

how

This originally started in blender using subdivisions and proportional editing to create Rock structures after that I took Basics cubes and added subdivisions until I created Crystal like structures

then I started sculpting a sphere into a thing for the crystals to go on creating a basic Geode then I added the liger Bots SVG as an imported STL. After that I worked on the light burn for the coin part which came out very good. Then I laser engraved.

Conclusion

I am writing this the day before the start of Dcmp as I sit in liger Bots with the project it's ready to go th the day before the start of Dcmp as I sit in liger Bots with the project it's ready to go this one very well and came out great I would like to do this again sometime
