Project Overview

I did this project to gain extra points for a drafting class so I created an entire city block with working Dimensions layouts and a basic electrical grid after that I simply created laser files to laser cut the whole thing assembled it by hand I'd graphite powder for realism colored and added for you printed props.

Why?

or whatever I did this all so that I could perhaps save myself from getting a bad grade in my drafting class which now that I'm in a drafting class I know was not going to be a challenge

how

I used some free online drafting softwares that I taught myself and basic slicers as well as laser engraving technology and 3D printing

conclusion

This was a very fun project and I would like to make miniature replica of places again such as the World Trade Center, the Eiffel Tower, and my basement
