Project Overview

This project was one of my first projects in the field. This report will mostly be a summary of what my experiment started with and what they ended with.

Why?

This all started with a simple Nerf gun that I took apart and finally understood how the different trigger mechanisms and safeties worked. It was all rather simple when I looked back on it but in the moment it felt like some ancient techniques blessed upon me.

later

This ended up eventually evolving to me fully taking a partner and finding different Regulators inside of them. I'm figuring out how to remove those in order to be able to beat the

maximum voltage input and get a much more powerful blast even creating my own blasters at times.

conclusion

Probably one of the most influential projects I have ever done I actually got to learn how different things work ends what started my interest in stem and engineering. From there it just slowly spiraled into what I have now which is amazing.
