Project Overview

It was going to keep trying to take my car I have to create an EV for Science Olympiad this would be a pretty fun project I would probably use for Neiman Motors a basic signal and a bit of coding

Why?

My Science Olympiad team is lacking and they need someone to step up so I am going to step up by creating this thing entirely by myself

how

So and I wonder I created this using for nemas 2 basic drive modules and personally cadded 3D printed shell

conclusion

Are Science Olympiad group is not great but the Eevee did very well as it can make very slight movements, had overall strength and was relatively light and worked with a new type of battery that I created.
