Project Overview

Created a slot machine in the middle of my Win Block at school
Was made to test the RNG capabilities of an Arduino and my own coding capabilities

using the skills for the slot bot initiative

Why?

I made this project because number one I was bored and I wanted to test an arduino's random number generators to see if I could create a basic logic circuit.

how

used a simple Arduino Uno and LCD screen and a button to create a slot machine

conclusion

I do understand RNG and could make modifications to the slot machine very quickly Arduino is very capable of this project and so am I intending on
